01

Basic Installation

Easily installed using basic drywall tools. The router securely mounts into the internal bracket and the outer ring mounts flush, allowing easy snap on access for maintenance cable management, or reset.

02

Refined Ceiling Finish

Sits perfectly flush with the ceiling surface. The precision engineered enclosure creates a refined architectural shadow detail allowing your wifi access point to blend nearly invisibly once installed.

03

Universal Compatibility

Custom built to your exact specification to fit any router or access point brand. Crafted from RF transparent materials to ensure zero signal interference - suitable for residential, commercial and hospitality spaces.
